

WHY A PRIMER?

We recommend always using a primer. A primer ensures a uniform surface, which is always the best base for the optimal presentation of the paint system (primer and lacquer). The most important advantages of a primer are to even out the porosity of the surface to be painted and to guarantee optimal adhesion. We advise the use of Fassicryl Primer or Fassicryl Sealing Primer in combination with the Fassicryl lacquers.

FASSICRYL PRIMER

- Excellent adhesion
- Perfect flow viscosity
- Good coverage
- Easy to apply
- Available in all colours
- 1 – 2,5L

FASSICRYL SEALING PRIMER

- Insulating primer
- Covers bleeding knots and resin streaks
- Excellent adhesion
- Available in white and other light colours
- 1 – 2,5L

WATER-BASED LACQUERS: BETTER FOR THE ENVIRONMENT AND FOR YOUR HEALTH.

These water-based Fassicryl lacquers have a low VOC, or Volatile Organic Compound, content. VOCs are hydrocarbons that easily evaporate into the air at room temperature. VOCs have been linked to several environmental problems, and they can also have harmful effects on our health (e.g. respiratory problems). Thanks to the low concentration of VOCs, these lacquers are better for the environment and better for the health of the painter.

® RUST-OLEUM brand

The Fassicryl range

TIMELESS FINISH IN 'NO TIME'

MO138.GB - 08.20

TOP-QUALITY WATER-BASED LACQUERS!

Mathys® is expanding its range of products for wood with the addition of water-based, polyurethane-acrylic lacquers. This polyurethane-acrylic finishing layer forms a hard film after drying. The advantage of these types of lacquer is that they are resistant to the oils on the skin as well as being scratch-resistant and easy to clean. For an even faster and tidier finish, we have also developed two sprayable lacquers, available in satin and matt finishes! The sprayable lacquers may also be applied with a brush for touch-ups.

SKIN GREASE-RESISTANT

Thanks to the special binder combinations, the dry paint film forms a hard and impenetrable finishing layer. It is impossible for the oil from skin and other dirt to penetrate this paint film, protecting your lacquer from wear for a long time to come. Thanks to the hard finishing layer, these lacquers are also scratch-resistant and easy to clean.

FASSICRYL SATIN & MATT SPRAY

- Sprayable (airless and airmix)
- High film-thickness, covers in one coat
- Even finish
- Skin grease-resistant
- Available in white and other light colours
- 2,5L

BRUSH/ROLLER OR SPRAY?

The most important benefit of spraying lacquers is the increased thickness of the layer that is applied. This also saves significant time, because you do not need to apply as many layers. What's more, when you spray paint onto a surface, there are no streaks or stripes left behind. And difficult to reach areas are covered with a thick, even layer of paint in 'no time'.

FASSICRYL SATIN & MATT

- Skin grease-resistant
- Scratch-resistant and easy to clean
- Excellent flow viscosity
- Good colour and gloss retention
- Available in all colours
- 1 – 2,5L
